

PPM Compass 360 · IT Security Fact Sheet

Project portfolio management inside Microsoft 365 / SharePoint Online

Product version 1.4.1

October 2026

MonVogo Ventures Inc., Ottawa, Canada

Runs in your tenant

A SharePoint Framework (SPFx) web part. It works only with the SharePoint lists of the site it is installed on.

No extra permissions

No Microsoft Graph or Entra ID (Azure AD) API permissions. Every request runs as the signed-in user.

No vendor data access

No PPM Compass server, database or API receives your data. No telemetry or analytics in the app.

1. ARCHITECTURE AND DATA FLOW

User's browser

Signed in to Microsoft 365. Opens a SharePoint page with the web part.

Your SharePoint site

Reads and writes the PPM lists over HTTPS with the user's own session.

PPM Compass (vendor)

No connection. Nothing is sent to us or to any third party.

- The app code is packaged in the .sppkg file and served from your own App Catalog. SharePoint itself loads Microsoft's standard page assets.
- No back end, external database, relay or proxy. Hosts: SharePoint pages and full-page apps. Custom script on the site is not required.

2. PERMISSIONS

Task	Who	Permission needed	Purpose
Upload the package	IT	SharePoint Administrator (or App Catalog owner)	Standard for any SPFx solution
First setup and setup after updates	Site Owner	Full Control on the PPM site	Creates and updates the PPM lists, columns and views
Apply list security (optional)	Site Owner	Full Control on the PPM site	Members edit without delete; Visitors read
Create and edit project data	Site Members	Contribute Without Delete on PPM lists	Daily work
View	Site Visitors	Read	Reporting; financial figures can be hidden from Visitors

The app can never do more than the signed-in user can already do in SharePoint. Roles inside the app (for example Project Leader) never change SharePoint permissions.

3. NETWORK AND DATA

Question	Answer
Outbound calls by the app	Only to the SharePoint site where it is installed.
Customer data leaving the tenant	None is sent to PPM Compass or any third party.
Analytics, telemetry, tracking, cookies	None in the app. The app sets no cookies.
AI / LLM services	None called by the app.
External CDNs at runtime	None used by the app. All libraries are bundled in the package.
Exports	Excel, PowerPoint and PDF files are created in the browser and saved to the user's device, under your own policies.

4. AUTHENTICATION AND AUTHORIZATION

- No separate login. Users are authenticated by Microsoft 365; the app uses the existing SharePoint session.
- The app never handles passwords, tokens or other credentials.
- Authorization is enforced by SharePoint permissions on the site and lists (Owners, Members, Visitors).
- Screens that hide or disable actions for certain roles are a convenience; SharePoint permissions are the security boundary.
- Links typed by users are checked before they are shown (for example `javascript:` links are blocked).

5. DATA STORAGE AND LIFECYCLE

- **Where:** SharePoint lists on your PPM site, with list version history. Retention, backup, eDiscovery and data location follow your Microsoft 365 settings.
- **In the browser:** UI preferences only (language, selected portfolios, saved filters, column widths, zoom), on that device.
- **Updates:** new package versions are uploaded the same way. A Site Owner then runs Setup once; existing data is carried forward.
- **Removing the app:** lists and data stay on the site until you delete them.
- **Trial or license end:** the app becomes read-only. No data is removed.

6. LICENSE CHECK

- A digitally signed license key, pasted into the app by a Site Owner.
- Checked in the browser. The app never contacts a license server.
- Tied to your SharePoint site ID or tenant ID; that ID is the only tenant information we need to issue a key.

7. THIRD-PARTY COMPONENTS

Bundled in the package, none downloaded at runtime:

- Microsoft SharePoint Framework 1.23.2
- React 17 and Fluent UI 8 (user interface)
- PnPjs 4 (SharePoint REST client)
- SheetJS (Excel export), PptxGenJS (PowerPoint export), jsPDF (PDF export)

Dependencies are monitored with automated vulnerability alerts. A full component list is available on request.

8. DEPLOYMENT

- Standard SPFx package (.sppkg) uploaded to your tenant or site-collection App Catalog.
- Direct App Catalog deployment is the supported route today. PPM Compass 360 is not currently listed in Microsoft Marketplace. Using SPFx does not imply Microsoft endorsement.

9. PRIVACY FACTS

- Project and personal data stays in your SharePoint Online tenant, in your tenant's Microsoft 365 data location (for example Canada).
- PPM Compass does not receive, store or process the data held in your lists and uses no subprocessors for it.
- We hold only business contact details you send us (name, email, organization) and the site or tenant ID used for your license key.
- Your organization remains responsible for its own privacy obligations (for example PIPEDA, Québec Law 25 or GDPR).

10. CONTACT

Security questions, questionnaires and vulnerability reports: support@ppmcompass.com (subject "Security"). More detail: ppmcompass.com/security
